Visqueen Contract Design Services. A New Approach To Design Based Solutions.

Traditionally it has been the role of architects to draw up and recommend the waterproofing design for below ground projects. However, BS8102:2022 and the Building Safety Act, recommend and legislate that all projects are led by suitably qualified and experienced persons. Ensuring the correct team has been selected at commencement of the design phase allows full traceability throughout the project, including the build phase and handover.

Visqueen Contract Design Services provide suitably qualified industry experts, that are able to deliver industry and legislation compliant designs for ground gas protection and structural waterproofing.

Our team have suitably qualified experts on hand to offer their expertise in structural waterproofing and ground gas protection systems. They are all certified surveyors in structural waterproofing (CSSW) offering end to end support, including:

- Contract design service
- PCA members
- An in-depth understanding of the requirements of BS8102:2022 and BS8485:2015+A1:2019
- Extensive knowledge of Waterproofing systems available in the market place
- Specification Document and project appraisal
- TYPE A, B & C structural waterproofing solutions
- CAD Design
- On-site support
- Digital design pack on completion

Whatever the requirement – from waterproofing membranes, to structural, integral and drained cavity constructions through to gas protection – we work with all stakeholders to support your project efficiently and cost-effectively. Visqueen Contract Design Services works with both the Principal Contractor and Principal Designer, in-line with the new Building Safety Act framework. This ensures all designs are in accordance with industry recommendations and guidance, through to on-site support.

Working to the highest standards through technical support, innovation and excellence as key values, Visqueen Contract Design Services are a trusted source of technical expertise.

Our core values, technical service levels and product portfolio are well recognised in the industry. When combined with Contract Design Services our trusted technical authority delivers the reassurances required to produce a thorough design brief for your project.

The New Standard - Visqueen Contract Design Services. Industry Compliant Design for Waterproofing and Gas Protection.

Visqueen Contract Design Services allows direct access to our Certified Surveyor's in Structural Waterproofing (CSSW) qualified team, providing a highly experienced and dedicated waterproofing design specialist for those projects that require it.

Delivering complete support throughout the entire project, Visqueen Contract Design Services delivers assurances that work with warranty providers requirements.

The table below demonstrates the differences between our traditional standard services and our new contract design services.

	Visqueen Contact Design Services	Visqueen Standard Services
CAD Design based solutions Issued for Guidance Only - Designers Approval Required	X	✓
Technical Site Support	✓	✓
Bespoke CAD Design Based solutions – Dutyholder Compliant	✓	X
Bespoke Project Designs (subject to T&C's)	✓	X
Digital design pack	✓	X

The Correct Design Every Time.

LABC and Premier Guarantee provide warranties for a wide range of new build properties across the UK. In 2016, they updated chapter 6 of their technical manual, to improve the quality and overall process of the design of waterproofing systems for all below ground structures.

As part of the update, all designs must be carried out by a suitably qualified individual/company. The qualification referenced within their documentation is the CSSW (Certified Surveyor in Structural

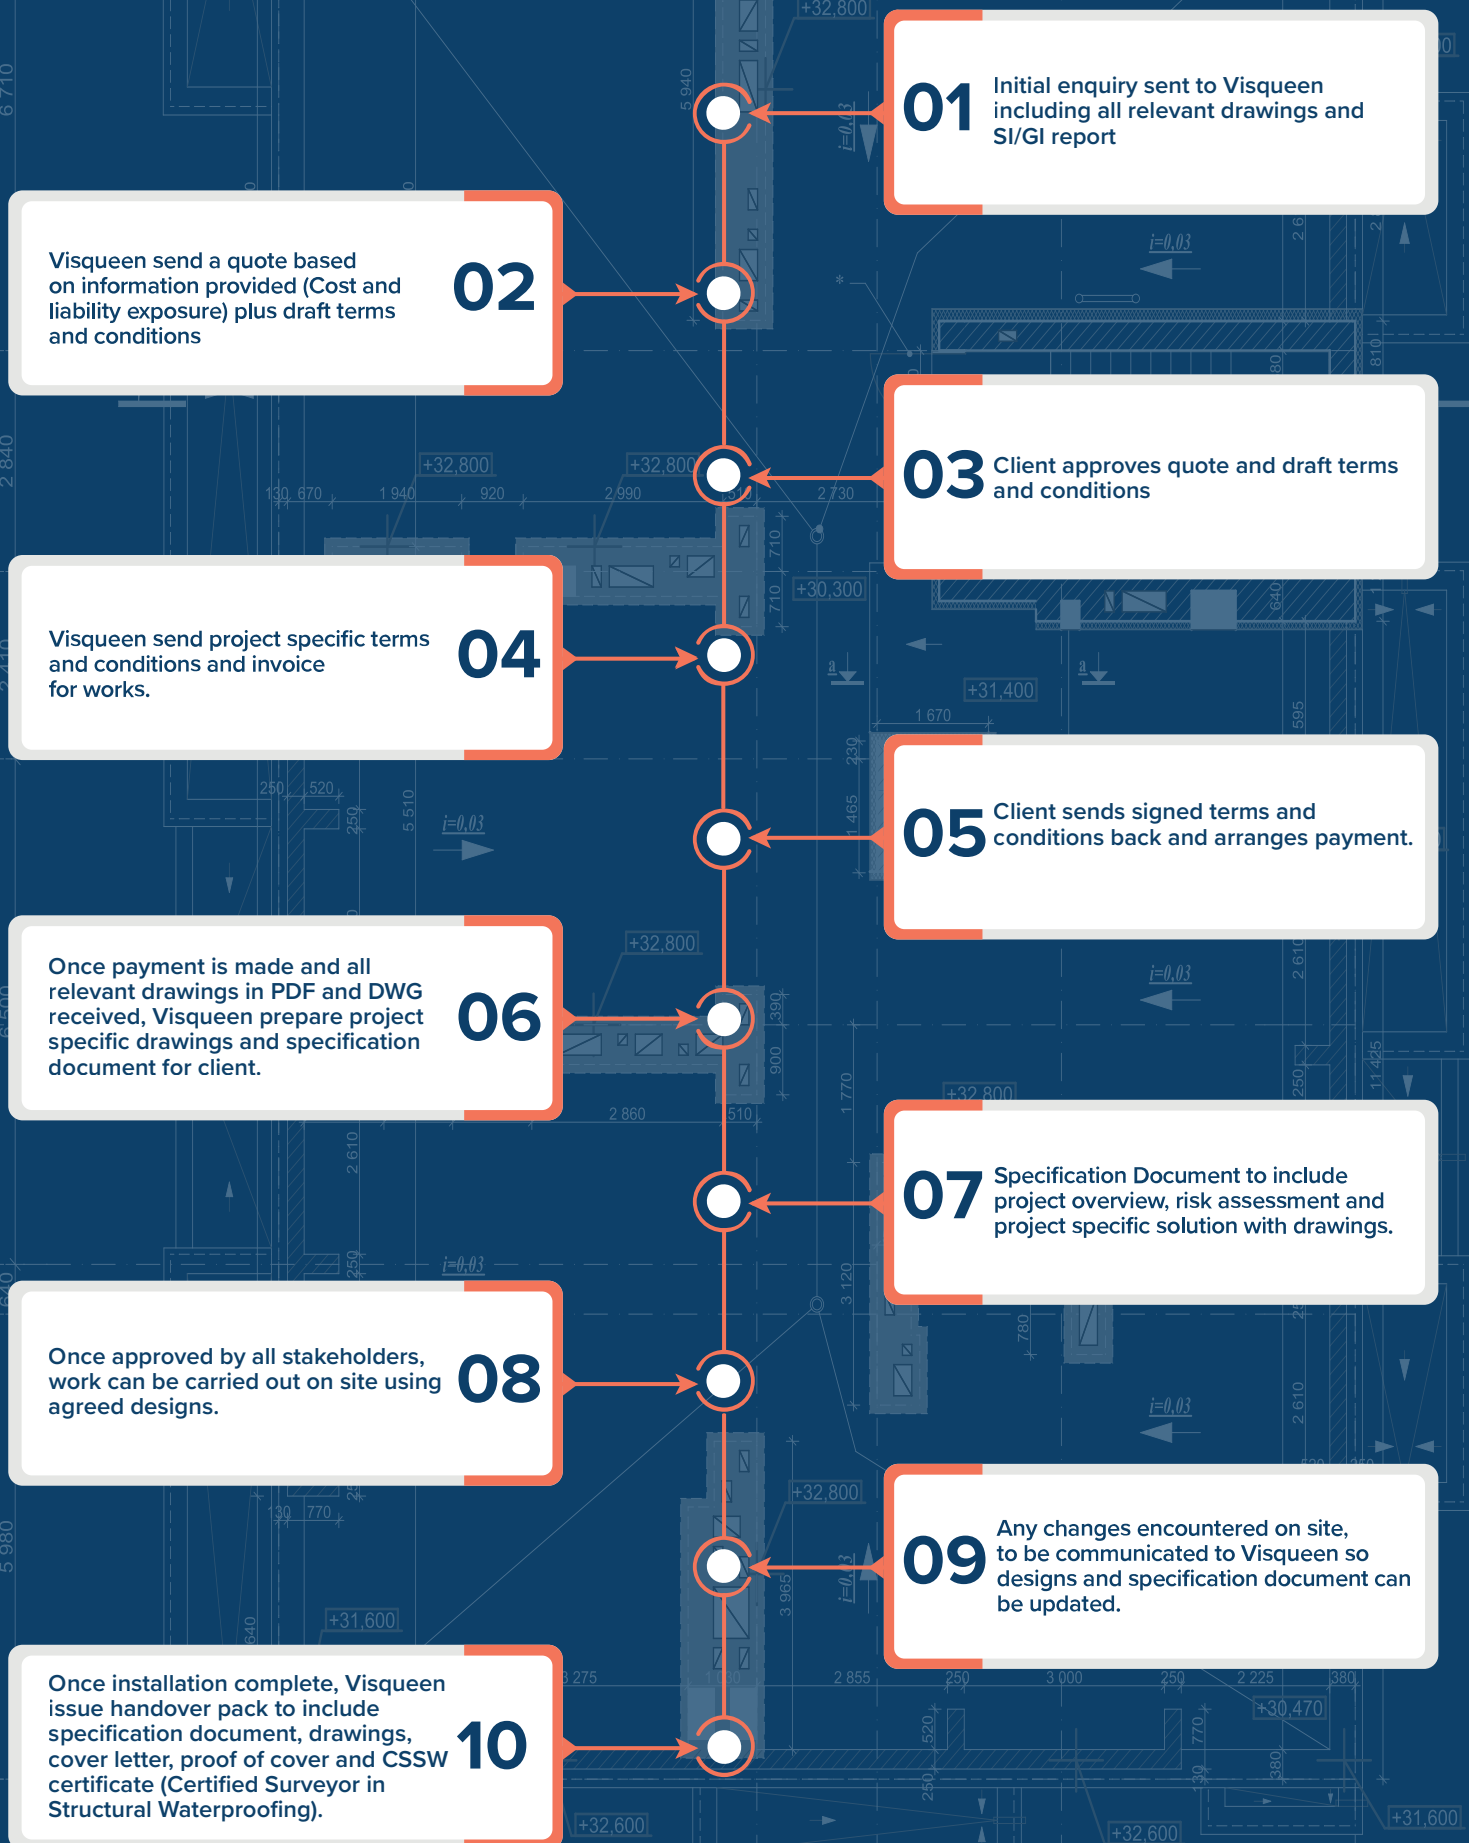

Waterproofing) which is obtained via the Property Care Association (PCA).

At Visqueen all of our technical support managers are CSSW qualified to compliment the requirements of the industry and provide further reassurance.

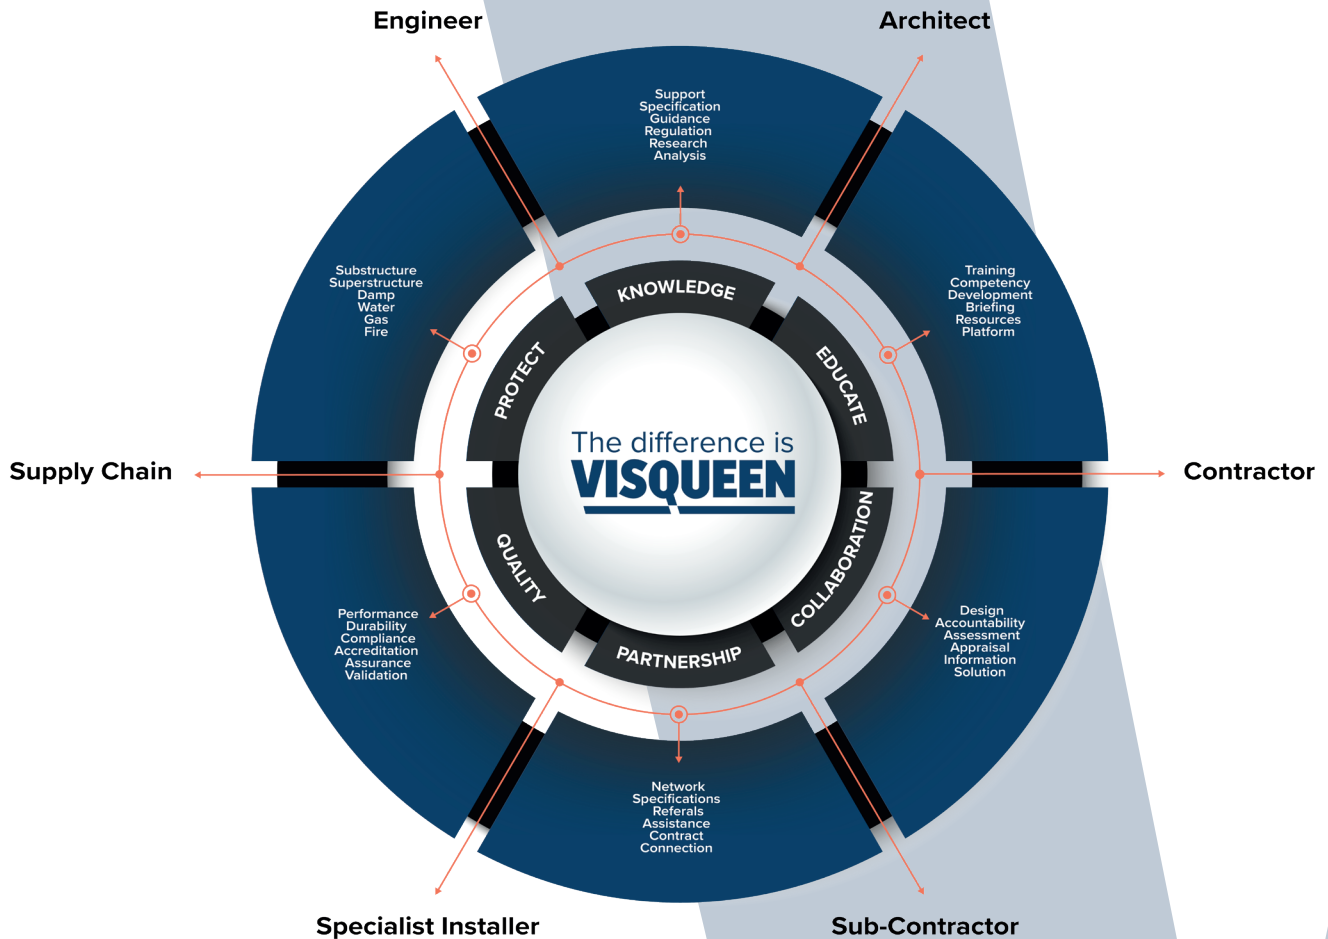

Visqueen maintains a level of professional indemnity insurance for our business activities.

CONTRACT DESIGN

Customer Contract Design Process Flow

Complete Service

We design and deliver high-performance waterproofing, gas, damp, and passive fire protection systems aligning every solution with the latest regulatory requirements.

Driven by technical expertise and a commitment to sustainability, we support specifiers from concept to completion with robust system design, hands-on training, and full project support—ensuring safer, smarter, and fully compliant buildings.

This is the Visqueen difference.
