TYPICAL SECTION: RAIN SCREEN PANEL

- **Airtightness:**
  - Thermal performance will be compromised if the construction does not achieve adequate airtightness.
  - As CLT does not normally include a vapour control layer (VCL), the system relies entirely on the detailing of joints to achieve airtightness.
  - Visqueen recommend the use of Visqueen Vapour Edge Tape (150mm x 15m) which should be used to seal across all external joints.
  - Additional joint seals may be required (ie pre-compressed foam tape) at certain internal joints, window junctions etc and these seals must be specified by the CLT panel specialist.
  - Pre-completion testing may be required to demonstrate compliance.

TYPICAL SECTION: MASONRY

- **NB: DO NOT SCALE - USE FIGURED DIMENSIONS ONLY.**
